

HTML → markup language

↪ SKELETON OF A WEBSITE

## INTRODUCTION

HTML → Hyper Text Markup Language

HTML is the language of the web. It is used to create websites.

We use HTML tags to define look & feel of a website.

With understanding of these tags and how to put them together, we can create beautiful websites easily!

## THEN WHY CSS & JAVASCRIPT

HTML is used for defining layout of a page - A barebone page structure.

CSS is used to add styling to that barebone page created using HTML.

JavaScript is used to programme logic for the page layout eg. what happens when a user hovers on a text, when to hide or show elements etc.

HTML = car body (only metal)

CSS = car paint, decoration etc.

JAVA SCRIPT = car engine + interior logic

HTML consists of a set of tags contained within an HTML document and the associated files typically have either a ".html" or ".htm" extension.

HTML is the practice of displaying text, graphics, audio, video etc.. in a certain way using special tags.
